

Transportation Information

These are the five choices of transportation. Your students must use at least three of these choices.

Automobiles - Automobiles must be rented. Money for car and gas must be logged on the Accounting Sheet.

Trains - Trains must be real trains. Students will have to look up the train station and schedule online to get the price of their ticket and arrival and departure times. This information will be logged on the Route and Accounting sheet.

Buses - Buses must be real trains. Students will have to look up the bus station and schedule online and get price and arrival and departure times. This will be logged in the Route and Accounting sheet.

Boats - These can be any kind of boat including Ferries. Many areas of Alaska are surrounded by water. Once again if the team is going to rent a boat or use a tour boat they have to log the cost on the Accounting sheet.

Airplanes – Airplanes can only be used once you have reached Alaska. Once again it must be a legitimate flight and the cost of the ticket must be logged on the Accounting sheet.
